

An advertisement for alfresco heating. The top half shows two women sitting on a patio, smiling and talking. One woman is wearing a patterned top, and the other is wearing a white top and holding a glass of wine. A patio heater is visible in the background. The bottom half of the image has a light green background with white text.

alf[®]

alfresco heating

Enjoy an alfresco lifestyle all year round
- infrared technology provides a cost effective
method of heating with less waste of energy
through efficient heat distribution.

alfresco infrared heating

Alf heaters generate heat only when required, allowing you to enjoy immediate warmth and comfort. They are up to 80% more efficient compared to traditional heating systems, reducing your running costs dramatically.

There is no longer the need to pre-heat the air or risk the escape of warmed air. Suitable for outdoor or indoor usage, Alf heaters are compact in design, look great wall mounted or free standing and come in three convenient sizes to accommodate all heating spaces.

Ideal Usage

Alf heaters are ideally suited for Alfresco dining and outside areas at cafes, restaurants and bars. In homes and work places, where doors are frequently opened and closed, Alf heaters provide immediate directional heat. They function well in areas of high heat loss and perform exceptionally well in buildings with elevated ceilings, e.g. schools, churches and community centres.

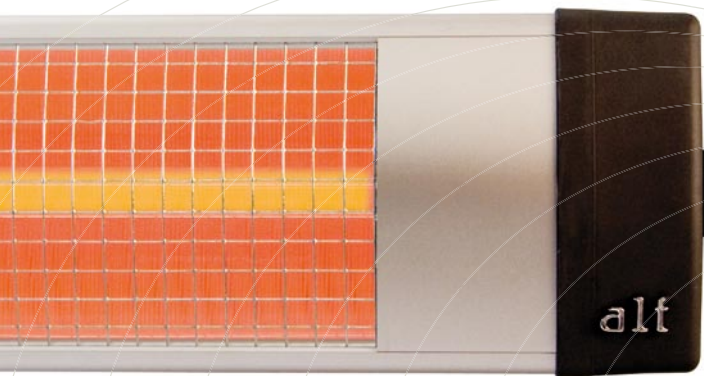

Features

- Immediate heat.
- Infrared heaters do not burn oxygen, creating an extremely efficient directional heat.
- Infrared heaters do not require the refilling of gas bottles, which can run out at inconvenient times.
- Odour and CO₂ emission free.
- Infrared heaters are not affected by wind or air movements.
- 80% more economical than traditional heating systems.
- Can be used with stand or hard-wired to wall.
- Leading reflection profile and a corrosion protected aluminium case and reflector structure.
- Average filament lifetime of 9,000 hours.
- 2 yrs Warranty.
